

MEI GRANULAR ABSORBENT

PRODUCT & SAVINGS COMPARISON

SUPER LIGHT CONSTRUCTION

Standard clay absorbent/floor dry is heavy to carry meaning an increased risk of injury and higher shipping costs. MEI Granular Absorbent is constructed to be light, making for easy portability and substantially lower shipping costs. 1 bag of Oil-Dri or Can dry weighs 3 times more than an equivalent-sized bag of MEI Granular Absorbent.

HIGHER ABSORBENCY

While being lighter, one 12 Lb bag of MEI Granular Absorbent absorbs the same amount of liquid as six 36 Lb bags of Can Dry or other clay-based absorbent. This results in substantial savings.
